

PROJECT:	TYPE:
LOCATION:	CAT:

Description

The Paver extrusion is designed for deeper recessed applications and can be used in drive-over areas. When fully sealed with neutral cure silicone sealant, the Paver can be used in outdoor recessed lighting applications as well.

Features

- Extruded aluminum construction
- Use tape light, lens, and end caps to create a complete fixture (tape light and accessories sold separately)

Mounting

Recess mount via construction adhesive, frost resistant/elastic ceramic glue, or mortar cement (For in-ground installations or for areas with exposure to moisture or heavy loads, special order products may be needed such as polystyrene foam board, sealants, or adhesives; please consult a professional installer)

Applications

Recessed applications, drive-over areas, outdoor malls, parking lots
 The aluminum is not meant to be poured into concrete in its current state. Exposure to green (fresh) concrete may cause aluminum to decay. Pouring this fixture in concrete is not recommended. It is recommended to place spacers when the concrete is poured for the lights to sit in, then be grouted or siliconed in.

Profile Dimensions

Ordering Information

Part Number	Description
PE-PAVER-1M	Paver Aluminum Extrusion
PE-PAVERLENS-1M	Frosted Polycarbonate UV Lens (Must Be Siliconed In Place)
PE-PAVER-FEED	Polypropylene Plastic End Cap With Hole
PE-PAVER-END	Polypropylene Plastic End Cap
